

WIRELESS TRANSMISSION OF IN-PLAY CAMERA VIEWS TO  
HAND HELD DEVICES

5

ABSTRACT OF THE INVENTION

10 A method and system for transmitting and displaying venue-based in-  
play camera views at a hand held device an in-play camera view may be  
transmitted from at least one in-play camera located at an in-play location within  
a venue (e.g., a racing venue). The in-play camera view may be processed for  
display on a display screen associated with the hand held device. Thereafter,  
the in-play camera view can be displayed on the display screen, thereby  
enabling a user of the hand held device to view the in-play camera view through  
the hand held device. The in-play camera view can be transmitted from at least  
15 one in-play camera to the hand held device in response to a user input and/or  
selection. In addition, a particular in-play camera view transmitted from at least  
one in-play camera can be recorded in response to a user input.
